

WHAT IS CLAIMED IS:

1. A ground joint connector comprising:

a connector housing;

a plurality of connecting portions disposed in the  
5 connector housing and configured to be fitted with  
respective mating connectors; and

a ground terminal installed in the connector housing  
and having a common grounding portion and a plurality of  
terminal pieces connected to the common grounding portion,

10 wherein the plurality of terminal pieces are arranged  
to be protruded into the plurality of connecting portions  
respectively, and

wherein the common grounding portion is arranged to  
be protruded outward from the connector housing.

15 2. The ground joint connector as claimed in claim 1,  
wherein the plurality of connecting portions are arranged  
in a straight line.

3. The ground joint connector as claimed in claim 2,  
wherein the ground terminal further has a bus bar extended  
20 in a direction as same as the direction of the arrangement  
of the plurality of connecting portions, and

wherein the plurality of terminal pieces are  
protruded from one side of the bus bar.
